

Our Client

Our client is a leading International Freight Forwarder that wanted to reduce their risk by applying strict carrier requirements and regular safety reviews for high value freight.

“

Fastmore goes beyond partnering to protect. They provide great service and regardless of market conditions, utilize their carriers to keep everything running smoothly.

”

The Challenge

To reduce the risk of theft, our customer did not want high value loads to be placed on public load boards and requested the use of well vetted carriers with proven track records. In our previous process, we restricted carrier usage based on Fastmore's experience, but this required a higher level of carrier vetting and monitoring.

Fastmore Solutions

- Carrier Classifications – We built a four-tier carrier classification to meet the customer requirements.
- Carrier Rating – Our carriers are rated based on 12 key metrics ranging from compliance to service performance.
- Customer classification pairing - Customer shipments are matched internally with carriers that meet various customer requirements, so the right carrier is selected for the job.
- Continual carrier vetting - We utilize an industry leading carrier monitoring service to keep our TMS up to date with carrier metrics. Carriers are continuously monitored to ensure compliance within our requirements.

Results

Our Carrier vetting technology provides better carrier matching to meet customer requirements. This is an ever-evolving technology using the best and latest industry practices, so we can provide reliability.
